Obtaining contact details when obtaining samples at private sector laboratories and collection centers

Blood sample of a patient whose blood sample was collected at a collection centre was positive for malaria. However, the collection centre did not have any contact details of the patient and the patient has not turned up to collect the report. The Anti Malaria campaign is unable to trace the patient and there is a risk of spread of malaria through this patient.

This issue highlights the importance of obtaining the contact details at the point of sample collection. Therefore, I kindly request you to take necessary actions to ensure that at least one contact detail (Telephone number/NIC number/Passport number) is recorded by private sector laboratories and private sector laboratory collection centers.
